

Meet the PC-BOT

Students can't wait to embrace this technology!

It's a PC.

Take full advantage of your existing computer science knowledge and curriculum. Inside this robot is a standard PC running Windows or Linux that can be programmed using C, C#, .NET, Microsoft Robotics Studio, JAVA or Player Stage. Based on industry standard interfaces and architecture, it can take advantage of inexpensive, off-the-shelf components for endless experiments.

It's a robot.

With the PC-BOT, learning about computers and robotics comes to life as it wheels around the room. Even the most jaded students form an almost immediate emotional bond with the robot...naming it...calling the robot "he" or "she". Basic through to advanced computer skills can be gained while having lots of fun. To embrace this new form of computer science and robotics in your school, contact us at info@whiteboxrobotics.com or 1-866-450-BOTS (2687).
